

TRANSOLUTIONS^{INC.}
TECHNOLOGY FOR HEALTHCARE INFORMATION

FOR IMMEDIATE RELEASE

**Transolutions, Inc. Selects M*Modal for Its Innovative
Speech Understanding Technology**

*Partnership Advances Transcription Offerings to Increase Productivity,
Physician Satisfaction, and EHR Adoption*

LAKE BLUFF, IL, April 21, 2008 – Transolutions, Inc., a technology-driven healthcare information company and one of the largest domestic medical transcription companies in the United States, and M*Modal, the creator of the industry's most advanced speech understanding technology, today announced an agreement to offer integrated services to Transolutions's transcription clients. This alliance streamlines the ability to share patient data by bringing structured and encoded data from dictation into Electronic Health Records (EHRs).

M*Modal's on-demand conversational documentation service, **AnyModal™ CDS**, combines speech recognition and natural language understanding to capture and comprehend clinical information from dictation, transforming it directly into accessible, retrievable, and shareable electronic files. The actionable data easily integrates into existing EHRs and allows for advanced functions not currently possible with conventional transcribed text reports.

"M*Modal's advanced speech understanding technology and its ability to capture structured and encoded data from dictation is a good match with Transolutions tightly integrated platform and will provide unique benefits to our clients, transcriptionists,

and business partners.” said Michael S. Carnrite, President, Transolutions, Inc. “Incorporating the **AnyModal CDS** technology will save the clinician time while providing the opportunity to create additional clinical value from their dictation (i.e. data mining)," he added.

Transolutions, Inc. transcription services are available to health care organizations through a variety of delivery systems. By using the combined services and tools now available, organizations can create physician-dictated medical reports that contain relevant patient data retrieved from existing repositories. By following healthcare industry reporting standards (HL7 CDA), AnyModal CDS data can be accessed, edited, and reviewed across departments through a number of flexible formats and shared between multi-vendor healthcare practitioners and facilities.

“Our two companies have a shared vision – to increase productivity, physician satisfaction, and the quality of patient care through easier access to dictated health information,” stated Michael Finke, CEO of M*Modal. “More advanced collection, integration, and analysis of patient data is the natural next step to advance the adoption and ultimate value of the EHR,” he said.

About M*Modal

M*Modal, based in Pittsburgh, PA, offers on-demand conversational documentation services that help healthcare providers capture discrete clinical information from dictation to generate accurate, complete, and timely electronic medical records. The company's unique speech recognition and understanding technology platform, **AnyModal CDS**, is a vital tool that empowers physicians to capture clinical facts and orders from dictation without requiring any change in their normal dictation routine. M*Modal's focus is on providing hospitals, healthcare IT vendors, and medical transcription service providers with the industry's most comprehensive yet most adaptable solution for creating highly accurate, structured, encoded, and shareable medical documents to increase patient safety, promote continuity of patient care, and reduce cost.
